When the weary watch is over, And the mists have cleared away, We shall know as we are known, Never more to walk alone, In the sunlight of the morning, When the mists have cleared away.

When the silvery mists have veiled us From the faces of our own, Oft we deem their love has failed us, And we tread our path alone; We should see them near and truly, We would trust them day by day,

Neither love nor blame unduly If the mists were cleared away, We shall know as we are known; Never more to walk alone, In the dawning of the morning,

When the mists have cleared away. When the mists have risen above us, As our father knows his own, Face to face with those that love us, We shall know as we are known Love beyond the orient meadows, Floats the golden fringe of day

Heart to heart we bind the shadows, Till the mists have cleared away; We shall know as we are known Never more to walk alone. When the day of night is dawning.

Its structure has already been studied by Goppert, who discovered what he conceived to be organic remains, and hence infers that the diamond is the result of vegetable decomposition under peculiar conditions. Sir David Brewster first noticed fluid cavities in the diamond, and explained the optical peculiarities of some diamonds by their presence. But they sometimes inclose minute crystals of different minutes. and mineralogists. Its structure has close minute crystals of different minerals, to which circumstance they also owe, in part, their peculiar optical properties. In the diamond, also, the inclosed liquor appears to be carbonic acid, as shown by its extraordinary expansion, and that is nitro oxide. The occurrence of this body in minerals is, it is said, highly improbable, and it seems, on the whole, that we may be justified in innatural liquid mineral substances.

It was remarked by Cicero, when speaking of the early period at which children commence talking, that they seem to recall a language which they had learned in another world. Providence appears to develop this prececious intelligence in them, in order that these tender and diminutive beings may make early advances in knowledge, and compensate by their drollery, their companionship and amusement, for the cares and responsibilities infancy demands.

CAPT. BOGARDUS, the famous birdshooter, has just given a remarkable evidence of his powers as a marksman and unrivaled skill in handling a gun. At Gilmore's Garden, in New York city, he undertook to break one thousand glass globes, three inches in diameter, thrown into the air from three traps, firing at them from a distance of eighteen yards, in one hour and forty minutes. He accomplished his task in the extraordinary time of one hour, seventeen minutes and ty-eight globes. This was at the rate of one shot every four and a half seconds, which seems almost impossible.
